

# PREMIUM LEGUME BOOST

## Premium Legume Boost

### Components

**Premium Boron** Maintains root health improving uptake of nutrients. Boron improves efficiency of resource movement. Important in structure and strength of cells Boron maintains health and activity of the crown

**Premium Manganese** Key in reactions of photosynthesis. Helps drive the engine producing sugars. Also strengthens cell structure and improves stress tolerance.

**Premium Copper** Aids in chlorophyll construction and conversion of amino acids to proteins. Improves plant health and disease resistance. Strengthens pollination.

**All-E-Viate:** Reduces ethylene in plants caused by stress. Allows plants to maintain better hormone balance. Improves respiration resulting in higher metabolism and energy.

## How it works

**Components work together to support physical functions that increase yield.**

**Improved plant structure means better quality and more production.**

**Quicker recovery times with more and finer stems to shade the ground faster**

**More Amino Acids converted to proteins, means better health and more energy in the plant.**

## Application

1 gl to the acre 5-7 days after cutting. There needs to be some regrowth.

Best application benefits are after first two cuttings. Depending on the quality desired, further applications following 3rd and 4th cuttings may be needed.

**Premium Legume Boost!**

Premium Legume Boost is compatible with fertilizers, insecticides, herbicides, and fungicides. It is always good to jar test to ensure compatibility. Always use label rates for best return on your investment.
