

# PREMIUM GREEN UP

## Cereal Grains

### Premium Green Up Components

**Premium Magnesium:** Center of chlorophyll and energy production. Also component of ADP-ATP energy transport. Needed for carbohydrate metabolism.

**Premium Manganese:** Key in reactions of photosynthesis. Helps drive the engine that produces sugars. Strengthens cell structure and improves stress tolerance.

**Premium Copper:** Aids in chlorophyll construction and conversion of amino acids to proteins. Improves plant health and disease resistance. Strengthens pollination.

**All-E-Viate:** Reduces ethylene in plants caused by stress. Allows plants to maintain better hormone balance. Improves respiration resulting in higher metabolism and energy.

### How it works

Components work together to support physical functions that increase yield.

Improves plant health, leading to better standability and increased production.

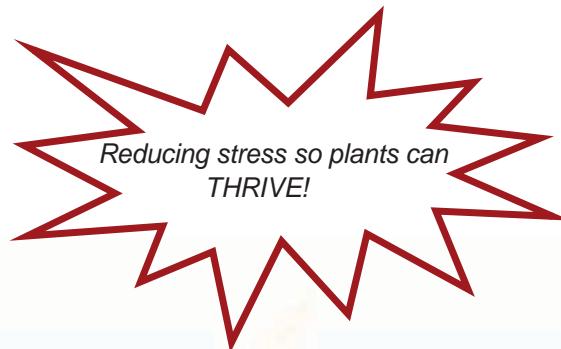

Increases chlorophyll and energy efficiency.

Converts more Amino Acids to proteins for better plant health and increased energy production.

### Application

Apply 5 qt. per acre with spring application. Reduce to 4 qt. per acre if followed with **Premium Train Fill**

### Premium Green Up!

Premium Green Up is compatible with fertilizers, insecticides, herbicides, and fungicides. It is always good to jar test to ensure compatibility. Always use label rates for best return on your investment.
